CALLS

**Improve your child's safety
via built-in functions that allow to:**

video
conversations

determine the location
of the child on the map

call for help
in an emergency

Quick video conversations between the caregiver and the child

Call and check the location of your child! The smartwatch is equipped with a discrete camera with a high quality microphone. It allows the child to call its parents at any time, and even hold a video conversation. If needed, the parent's application allows to remotely activate the microphone integrated in the watch.

Monitoring and safety from a satellite

The smartwatch receives signals generated by a satellite, allowing to see the location of the child on the map in real time. Due to combination of three advanced technologies, visualisation is exceptionally precise, since:

- LBS determines the zone
- GPS determines the exact location based on the satellite data,
- WIFI supports the precision of the measurements in buildings, e.g., in a school

Additional safety features

The application allows to precisely determine the safe zone for your child – when the smartwatch detects that the child is outside the zone, you will receive a relevant alert. For any emergency situations, the watch features an SOS button used to immediately notify the caregiver about a threat.

IP67 waterproofness guarantee

The watch complies with the requirements of international IP67 waterproofness standard, thus it will perform its role also during downpours or after short-term immersion. The silicone, skin-safe band guarantees stability of the watch on your wrist.

Trouble-free and convenient operation

The control application for caregivers and the smartwatch itself are exceptionally user-friendly, providing quick and reliable access to all functions of the watch.

The entire weekend on a single charge

The lithium and ion battery of 700 mAh capacity guarantees long operation, and the charging does not require much time. Battery operation time – up to 3 days.

Useful built-in applications

The watch features many built-in applications, which will help your child to organise its time and provide great fun. The smartwatch provides: a virtual lesson plan, a possibility to contact phone numbers of persons defined by the caregivers, sleep quality monitoring, pedometer, an educational mathematical game.
